## Plasma Physics Laboratory

### Physics 180 E

#### CONTENTS:

Introduction

Symbols and Commonly Used Constants

#### Chapter I. Plasma Production

- 1) The D.C. Discharge
- 2) Discharge in Magnetic Multipole Machines
- 3) Experimental Procedure
- 4) Appendix A: The Vacuum System
- 5) Appendix 8: Construction of Plasma Sources

#### Chapter II. Basic Plasma Diagnostics

- 1) Langmuir Probe
- 2) Double Probe
- 3) Microwave Interferometer
- 4) Experimental Procedure
- 5) Appendix A: Description of Probe and Circuitry

#### Chapter III. Energy Analyzer

- 1) Energy Analyzer Design
- 2) Performance of Ion Energy Analyzer
- 3) Experimental Procedure
- 4) Appendix A: Ion Beam Characteristics in Double Plasma Device
- 5) Appendix 8: Analyzer Specifications

#### Chapter IV. Ion Acoustic Waves

- 1) Introduction
- 2) Linear Dispersion of Ion Acoustic Wave
- 3) Damping
- 4) Ion Acoustic Shocks
- 5) Description of Experiment
- 6) Appendix A: Landau Damping of Ion Acoustic Waves
- 7) Appendix B: Collective and Free-Streaming Contributions to Propagating Ion Acoustic Waves

- 8) Appendix C: Damping of Ion Acoustic Waves in Presence of a Small Amount of Light Ions
- 9) Appendix D: Ion Acoustic Shocks
- 10) Appendix E: Ion Beam-Plasma Interactions in a One Dimensional Plasma

Chapter V. Electron Plasma Waves

- 1) Basic Theory
- 2) Experimental Configuration
- 3) Experimental Procedure
- 4) Appendix A: Equation for High Frequency Electric Field
- 5) Appendix 8: Wave Detection
