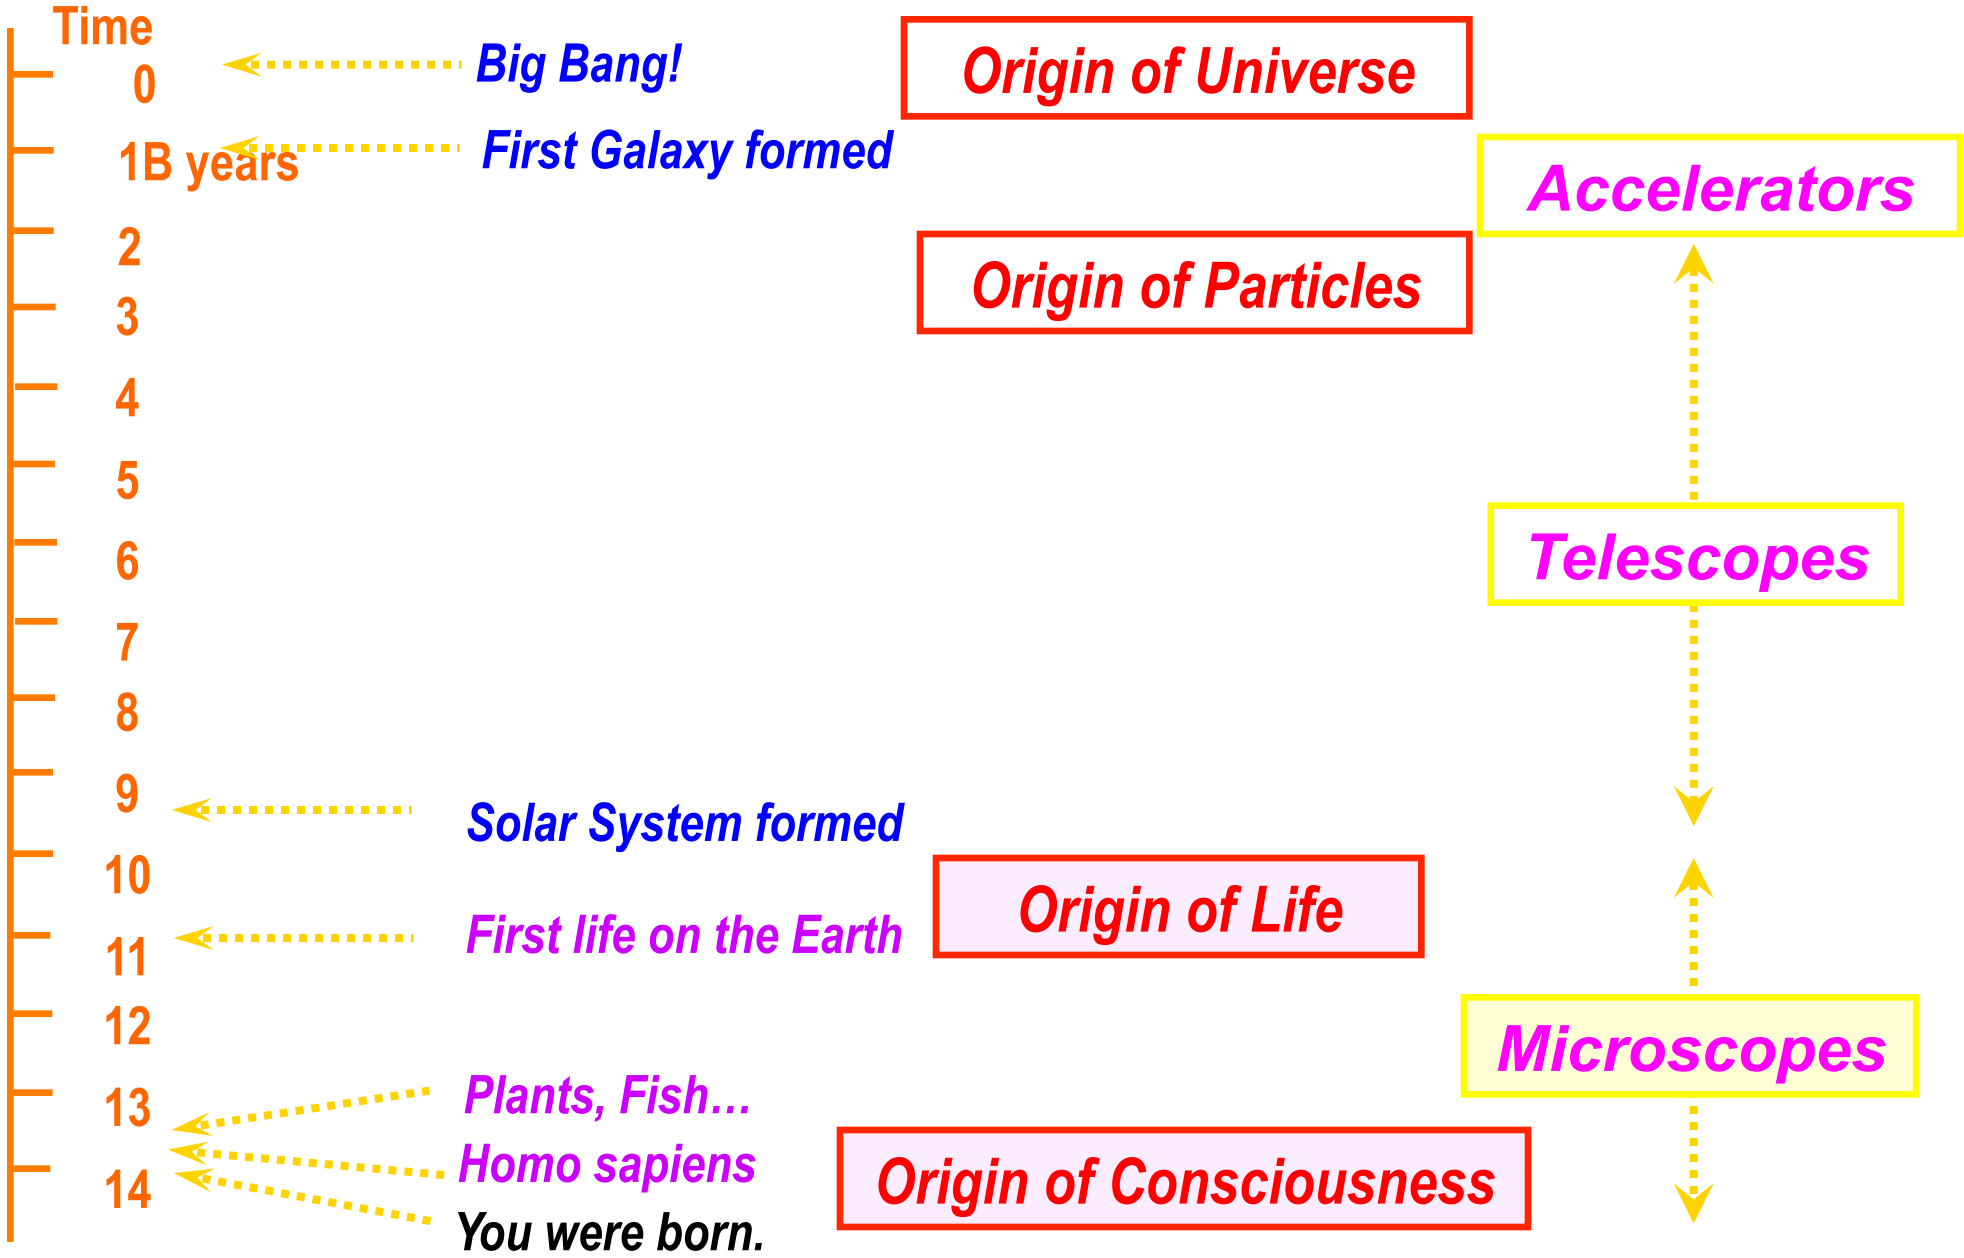
The Four Largest Mysteries in Nature



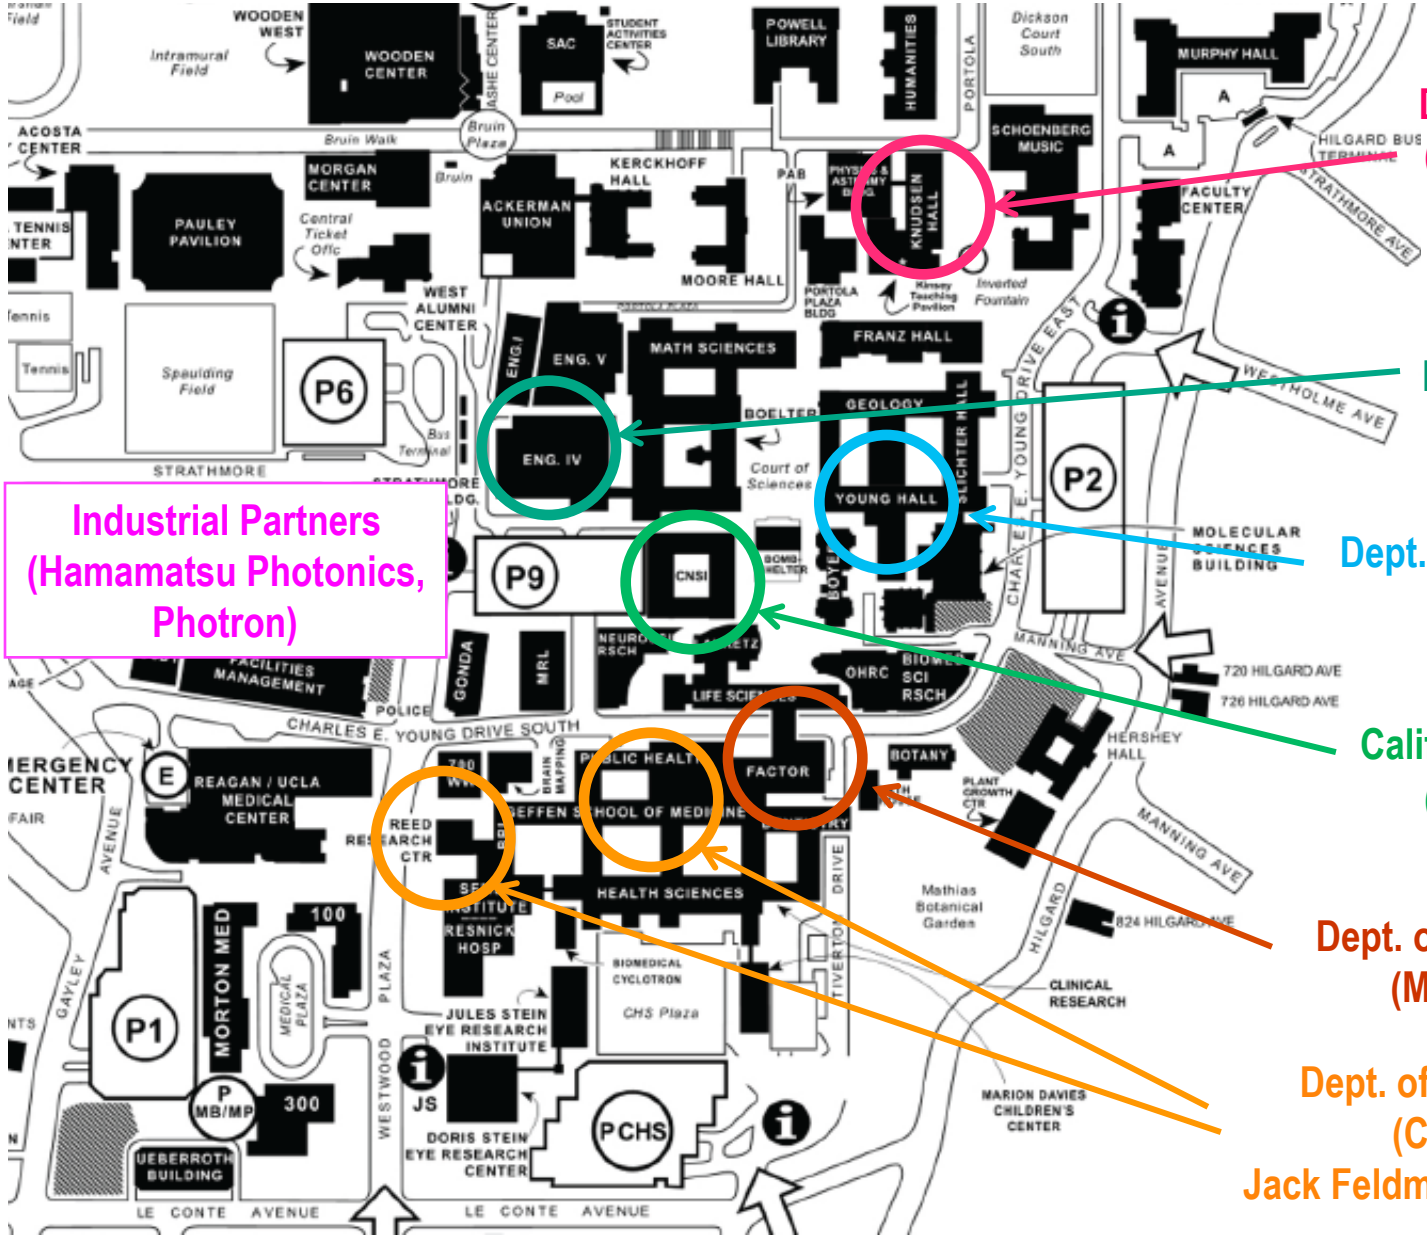
How to observe the Life and Consciousness ?

- We must look for "Live Life"
- Exactly the same way as we look for the "Origin of Universe"

  Telescope ↔ Microscope

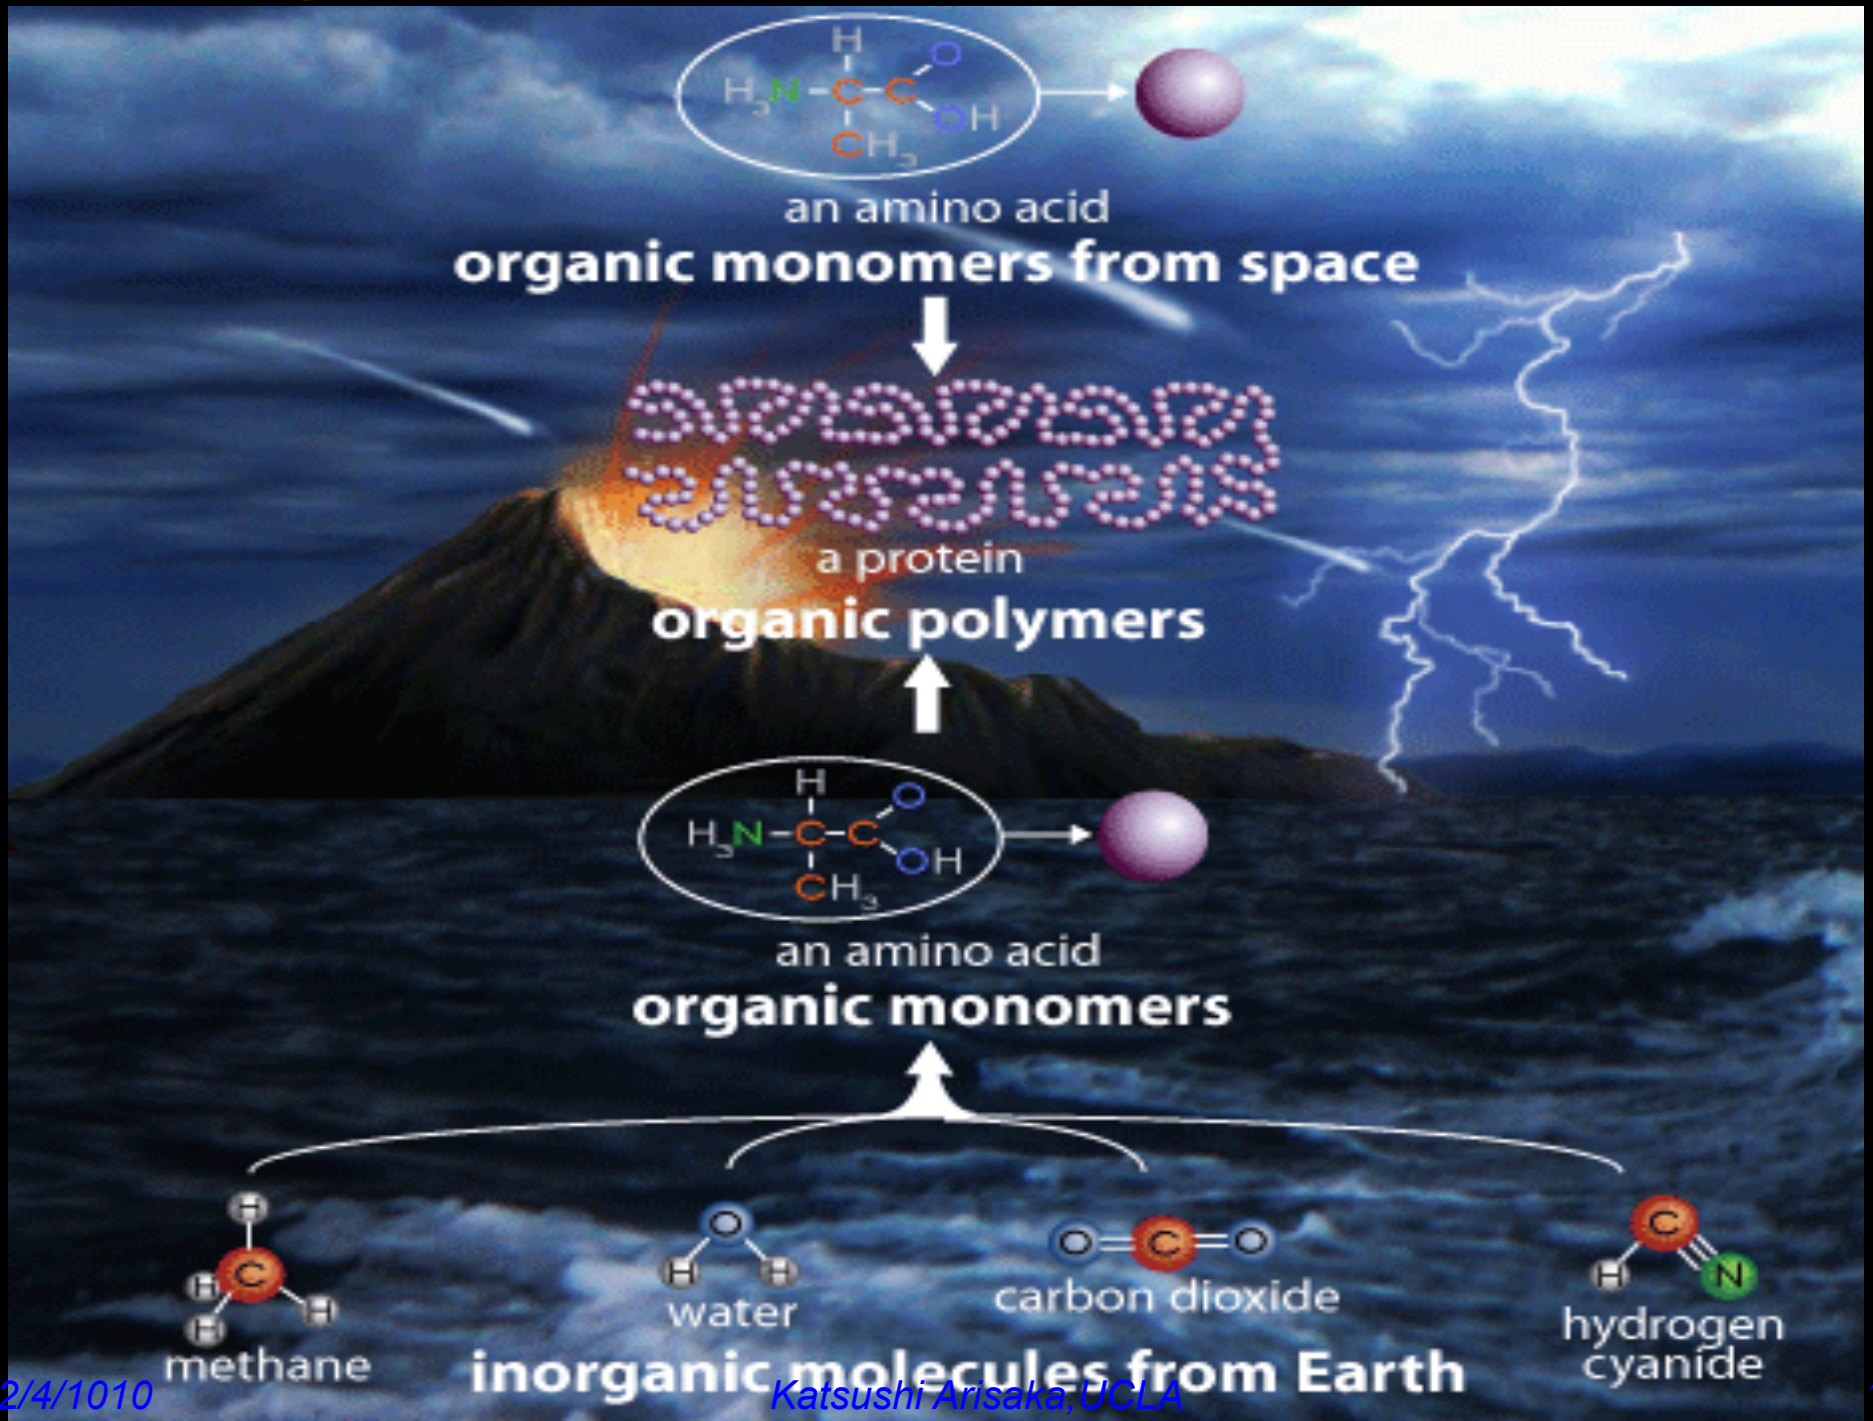
- Take advantages of the state of art "Photon Detectors" in particle physics.

Campus-wide Collaborations on High-Speed Bio-imaging

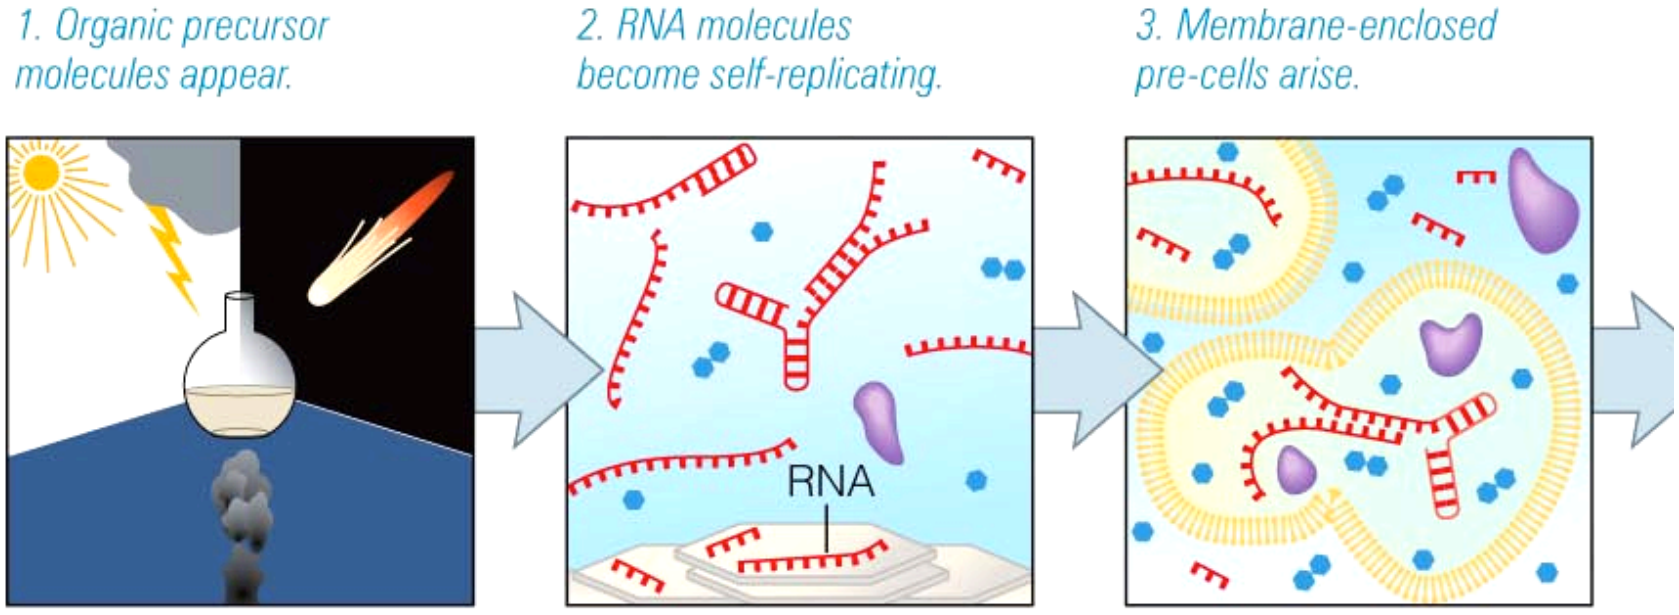


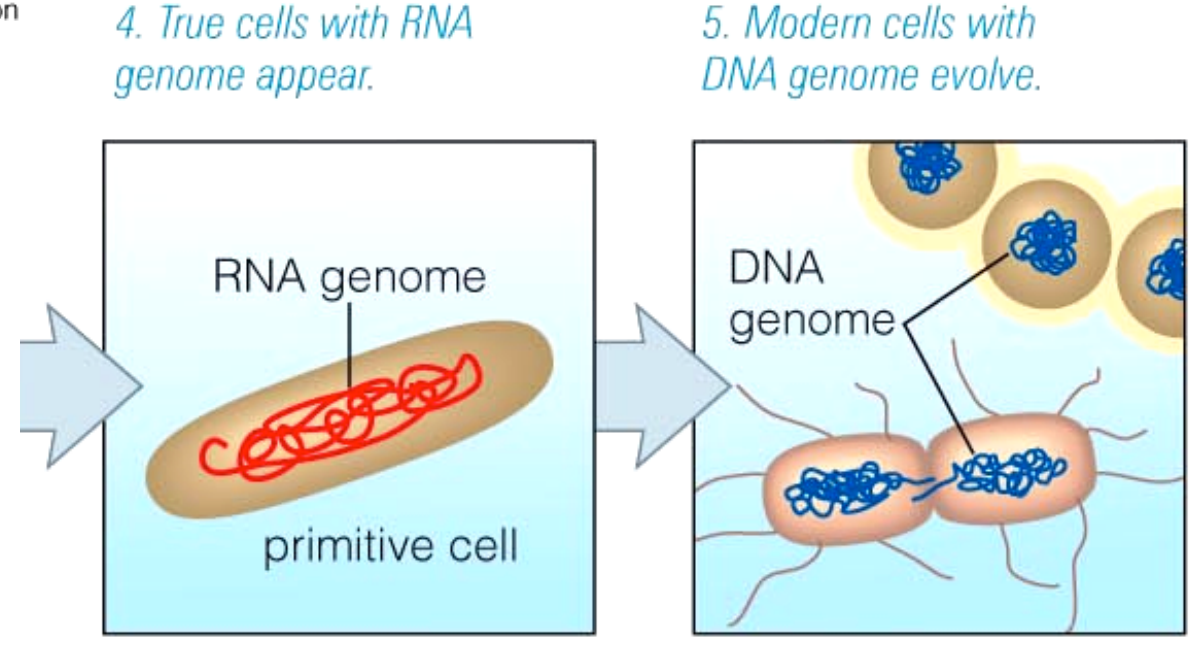
Origin of Life

Organic Polymers (4.5B → 4B years)



RNA Word (4B → 3.5B years ago)

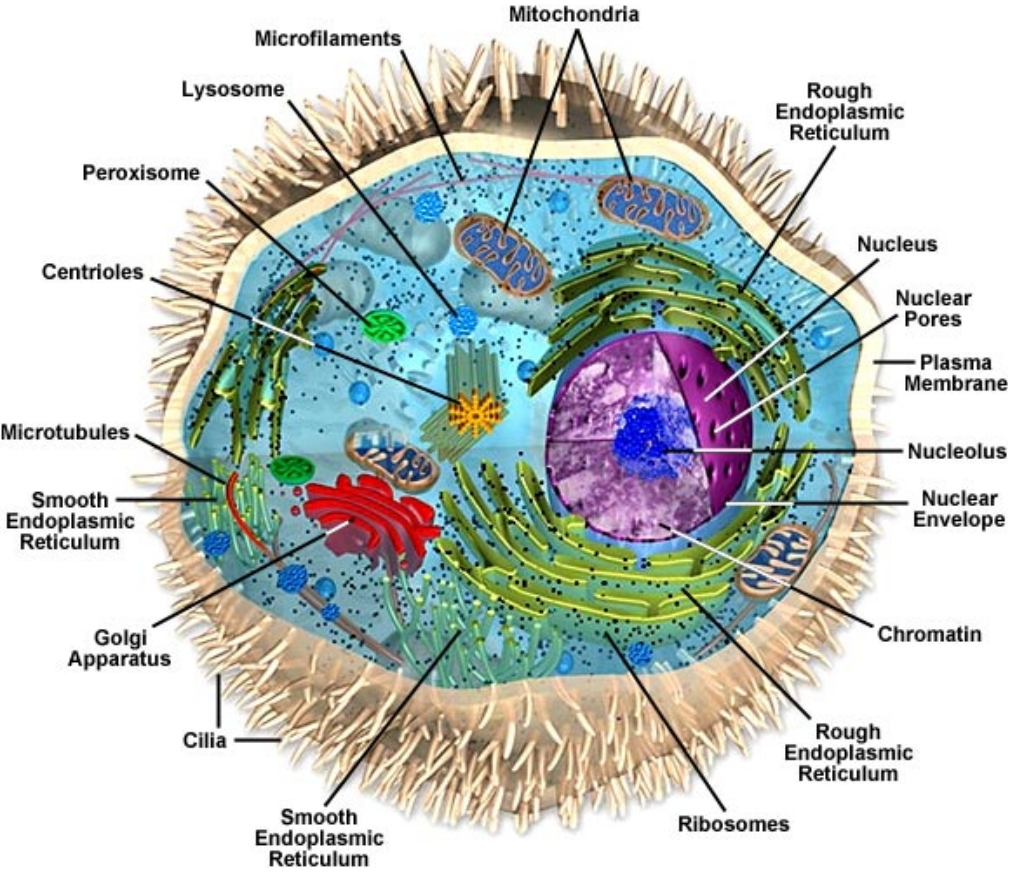




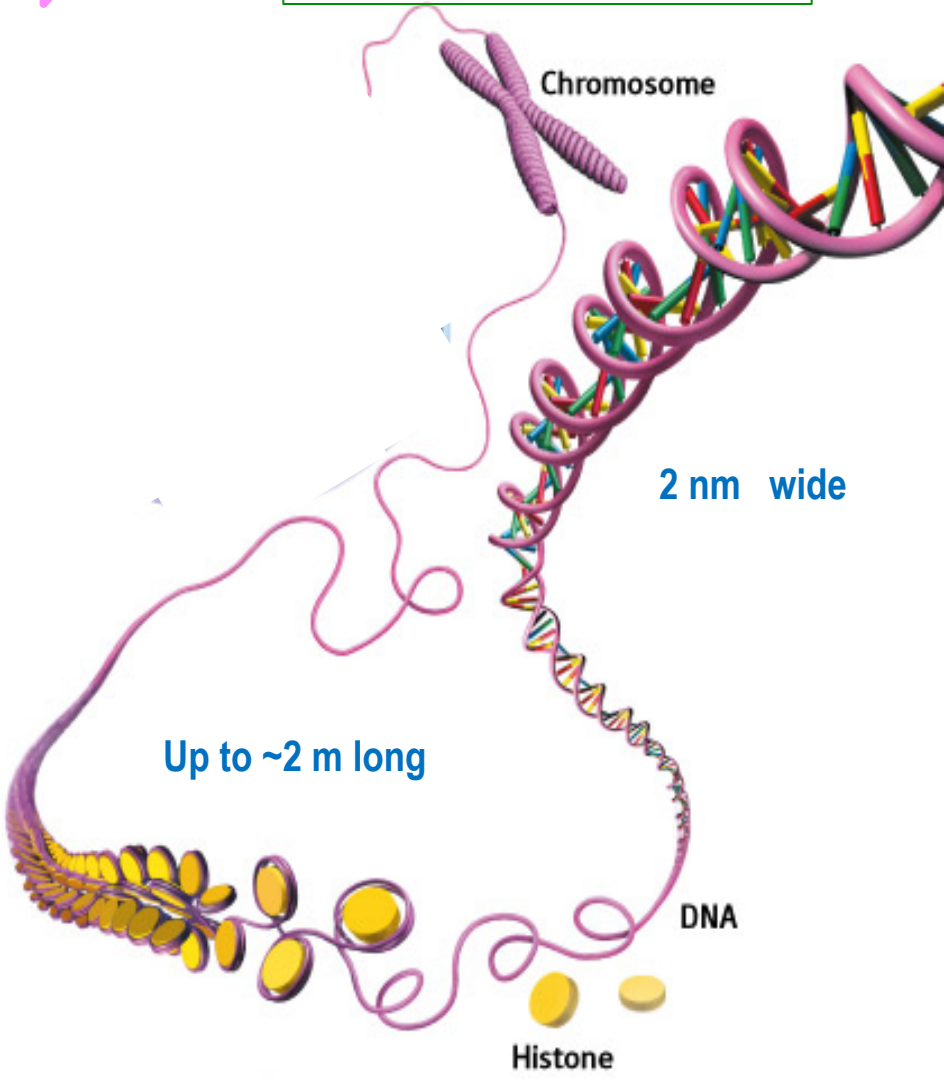
Eukaryote (~2B years ago)

Symmetry breaking

Cell made by proteins ⟺ **Gene made by DNA**



10 – 50 μm



What is Life?

- **Emergent Property**
  - Strongly-interacting, complex system
  - ~10^4 of different proteins in one cell
  - ~10^{14} cells in one life
- **Continuous, countless "symmetry breaking" towards coherent states**
  - Origin of life
  - Evolution of life
  - Growth from a single cell to a multi-cell body
  - Learning and memory

How to speed up microscopes

- All the existing microscopes are limited by the narrow bandwidth of readout.
  - Just one channel of FADC (Flash Analog to Digital Converter) running at 10 – 50 MHz
  - So-called Video Rate (30 frame/sec)

- The first step is to adopt multiple channels of FADC for massive parallel processing.
  - Like high energy experiments (such as LHC)

- In addition, we need Single Photon Sensitivity with high Quantum Efficiency.

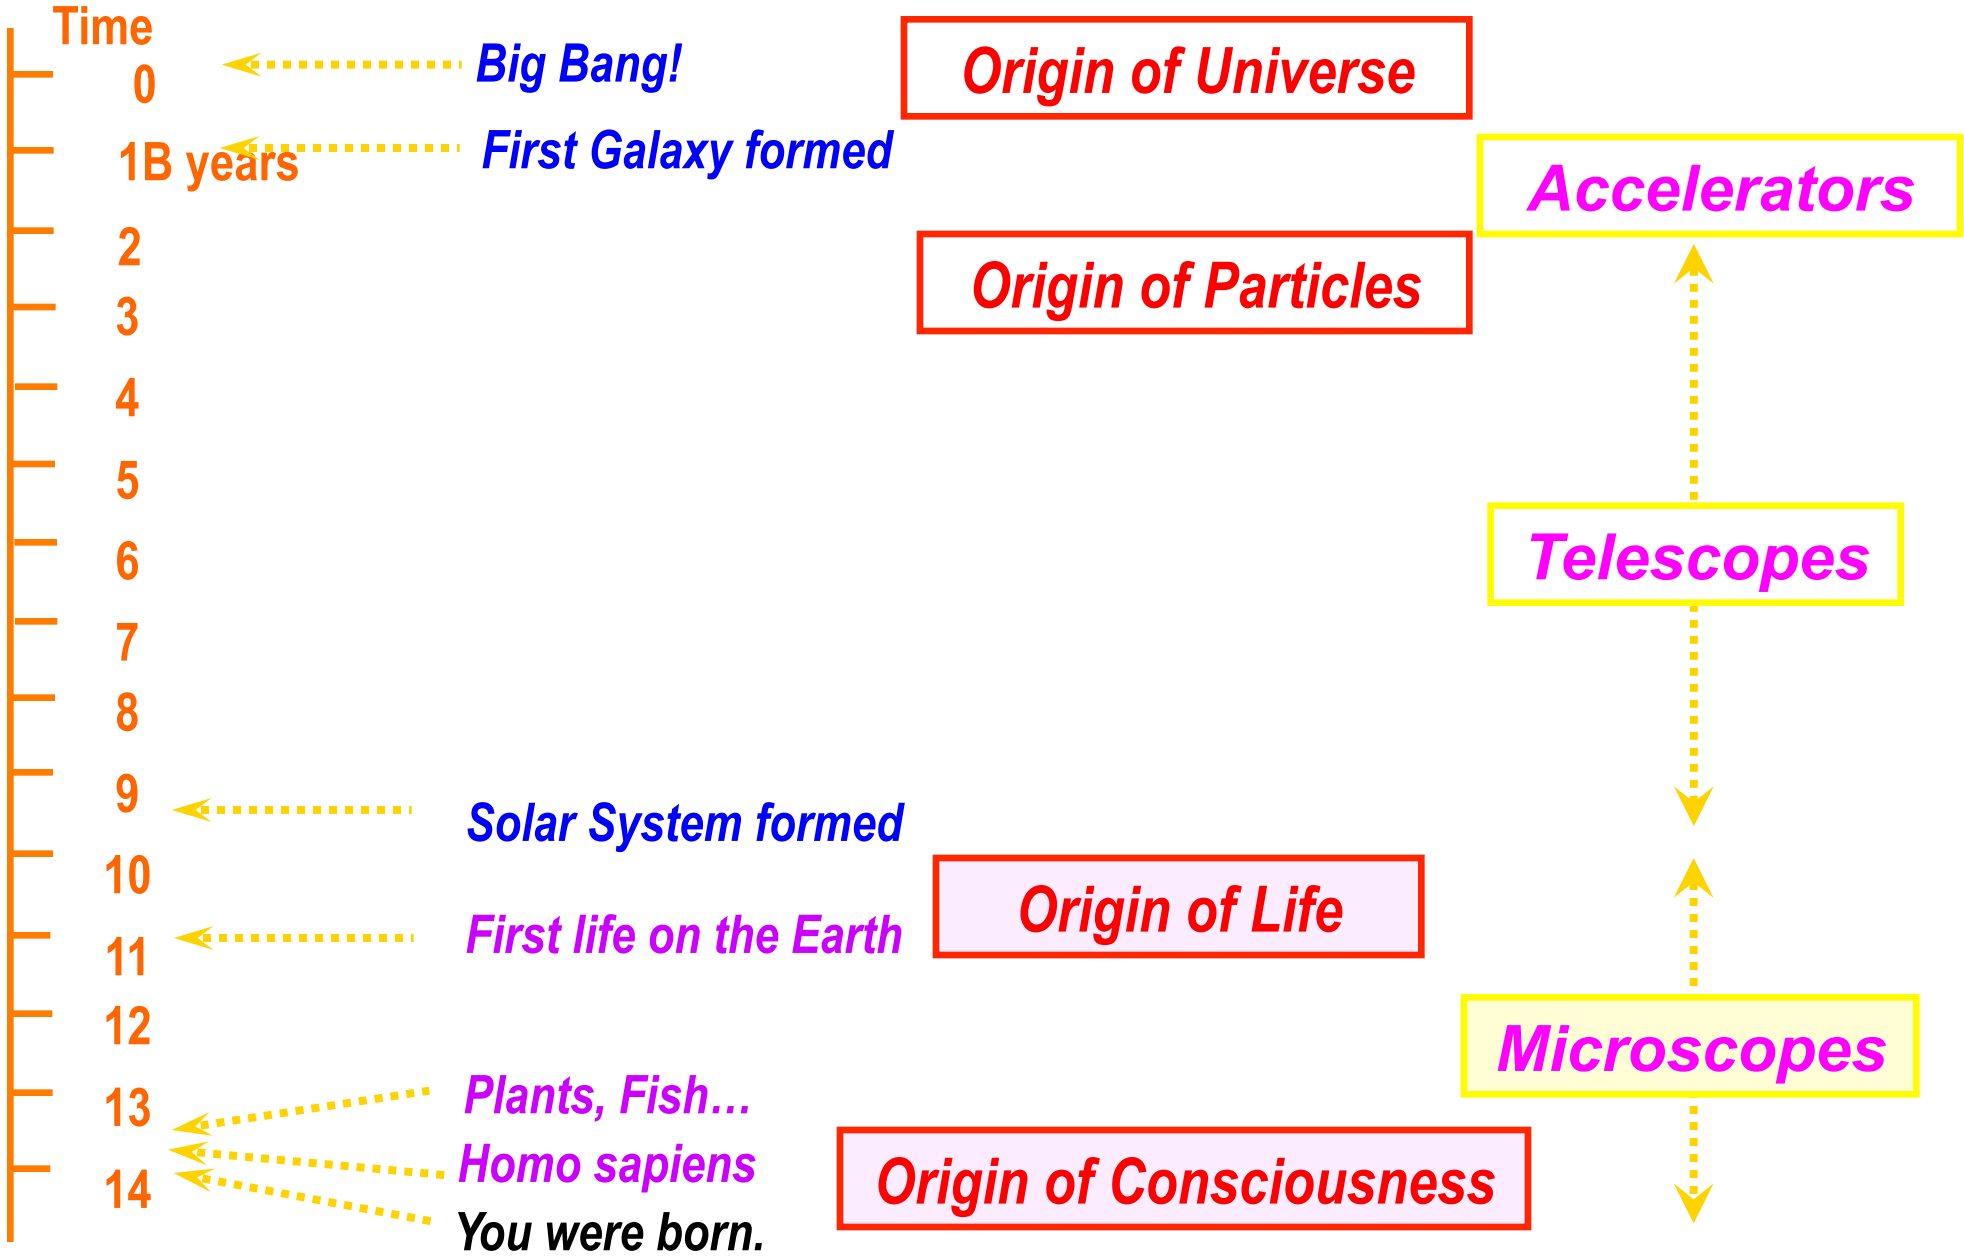
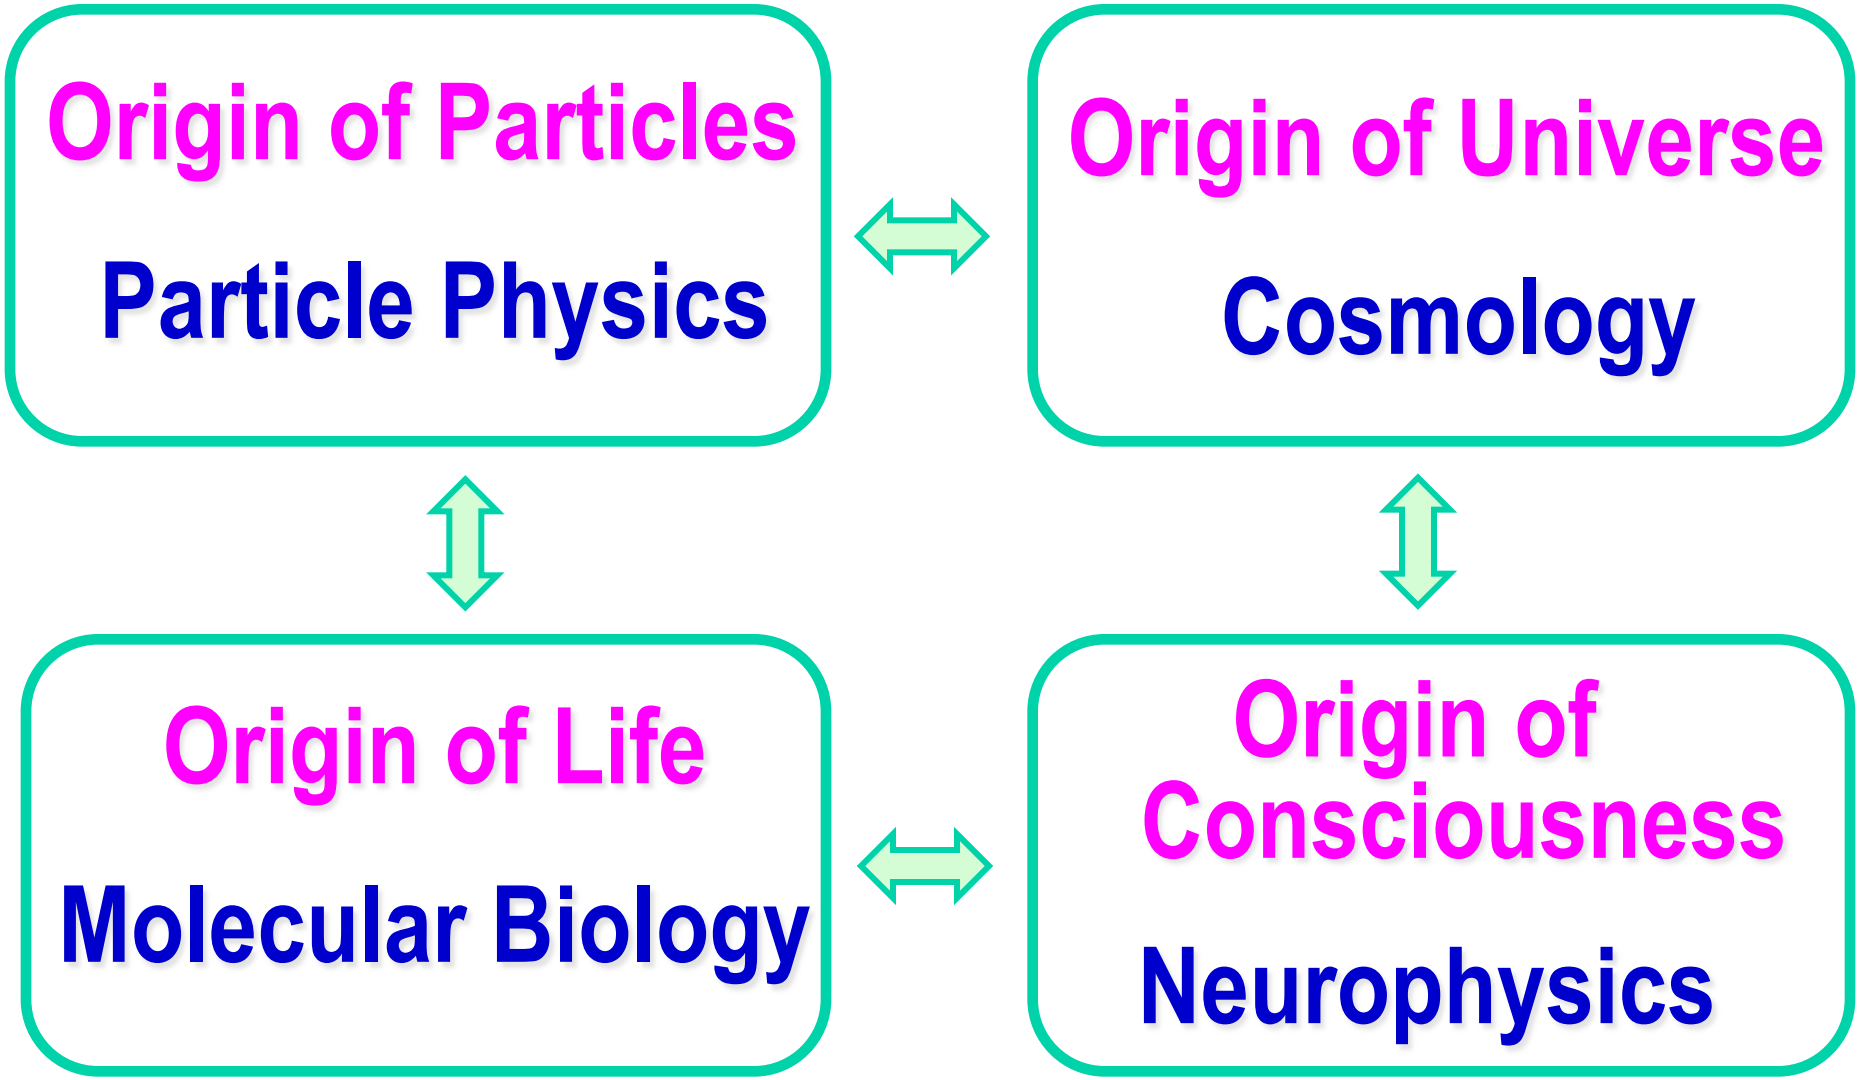
Summary

The Four Largest Mysteries in Nature



Four Major Science



Future of Ultra High-speed Bio Imaging

- **Origin of Life:**
  - Networks of molecules in/on a cell
  - Competition against Brownian : 10 – 100 nm / 1 msec
- **Origin of Consciousness:**
  - Neural networks
  - Action potentials: 1 msec

- **> 1,000 frame/sec with nano second time stamp.**
  - Gated Image Intensified CMOS
  - Super-PIAS (GHz Photon-counting Imager)
  - 6D Imaging by Streak-CMOS Camera

Concluding Remarks

- "Life" is a complex system in 4 dimensional space-time.
  - Emergent property
  - Strongly interacting
- Countless "spontaneous symmetry breakings" during the evolutional and developing process of life
- Fully controlled experiments by "Virtual Reality" under way.
  - Outer world (environment) vs. Inner world (brain)

- "Ultra high-speed imaging" may reveal the fundamental principle of the complex life like ours.
  - How can life overcome thermal fluctuation?
  - Networks in a cell and between cells (neurons)
